

Strategic Banner Integration

Sals3 Marketplace UI/UX Enhancement Proposal

Building on the Sals3 Marketplace UI/UX design system and prototype (Sals3 Marketplace.dc.html), this proposal outlines the integration of strategic marketing banner placements based on proven visual psychology principles. The goal is to add high-converting, context-aware banner components while strictly maintaining Sals3's trust-first rules and design tokens.

I. Banner Additions & Visual Psychology Mapping

1. Home Page Visual Anchor Banner

PSYCHOLOGY: F-Pattern Anchor & Cognitive Priming. Captures exploratory visual attention right after top-level navigation before visual fatigue sets in.

PLACEMENT: Directly below the horizontal categories row and above the "Deals" section header.

DESIGN: Full-width card with dark slate background (#1e293b), subtle electric crimson accents, a prominent headline (e.g., "Payday Sale: Extra ₱200 Off Orders Over ₱1,500"), a trust badge, and a secondary action button.

2. In-Feed Native Ads

PSYCHOLOGY: Bypassing Banner Blindness. Blends promotional content naturally into the user's active item-scanning flow.

PLACEMENT: Integrated into the product grid as an ad card slot (replacing every 8th or 10th card in homeGrid and listGrid).

DESIGN: Shares the exact aspect ratio (1/1) and border tokens of standard product cards, styled as a featured brand spotlight or bundle deal with a discrete "Sponsored" or "Featured" micro-badge.

3. PDP Contextual Value Priming Banner

PSYCHOLOGY: Value Priming & Decision Reinforcement. Capitalizes on high purchase intent during item evaluation without interrupting the purchase CTA.

PLACEMENT: Right column on the PDP, positioned directly below the Price & Discount Breakdown box and above the Variant/Size selector.

DESIGN: Compact alert box (padding: 10px 14px) highlighting store-wide or brand-specific offers (e.g., "Combine with LumenPH official lamps and get 15% off at checkout").

4. Cart Goal-Gradient Threshold Banner

PSYCHOLOGY: Goal-Gradient Effect & Loss Aversion. Accelerates motivation as users near a savings threshold.

PLACEMENT: Inside the Cart summary sidebar box, positioned directly above the Free Shipping progress bar.

DESIGN: High-contrast incentive banner emphasizing remaining spend needed for maximum discount (e.g., "Add ₱120 more to unlock FREE Express Delivery on your second shipment").

II. Strict Design System Rules

Design & Compliance Constraints

- **CTA Color Separation:** Do NOT use Sals3's primary action electric cyan (#0891b2) for banner backgrounds. Primary cyan is strictly reserved for core purchasing actions ("Buy Now", "Add to Cart", "Checkout"). Banners should use dark slate gradients (#1e293b), subtle borders, or electric crimson accents to avoid visual competition.
- **Product Density:** Keep banner heights compact (max 120px desktop height for horizontal banners) so they don't push catalog items off-screen.
- **Compliance:** No fake countdown timers, restarting clocks, or deceptive scarcity warnings ("Only 1 left!"). Transparency and trust are paramount.
- **Accessibility:** Ensure all overlay text meets WCAG AA contrast standards using Sals3 font tokens (*Plus Jakarta Sans* and *Outfit*).

III. Deliverables Needed

- **Route Views:** Updated route views (`isHome`, `isList`, `isPdp`, `isCart`) in the prototype with these four new banner components rendered conditionally.
- **State Logic:** The corresponding React/JS state logic updates required to drive these banners smoothly within the existing prototype architecture.
